

SCANNER INTERFACE MODULE

S.I.M.

HIGHLIGHTS

- Ethernet and Serial Scanner Compatible
- Set master barcode from external data source
- Data handling and storage solutions engineered to customer specifications
- Compatible with multiple barcode manufactures
- Scalable to fit customer needs

WHAT IS S.I.M.?

The SIM is a customizable barcode verification interface. It uses a Proface HMI/controller and can be interfaced with multiple manufacturers barcode scanners. SIM can be programmed to reject product with an incorrect or not readable barcode and can stop the line and alert operators when a barcode fails to match the programmed master barcode. The number of consecutive mismatches and/or no reads that trigger a line stop are easily programmed via an intuitive HMI screen.

With the ability to incorporate customer-specific signaling, data handling and storage needs, SIM is the ideal solution for reliable, high speed barcode applications. With an expandable interface the SIM can grow with your company's needs.

About CSD

CSD&A has provided factory automation solutions to a wide variety of industries. The goal is to assist our customers in reducing downtime, improving cycle time, and increasing the overall throughput of the manufacturing processes through the use of the latest technology in automated control systems provided by CSD&A

CSD&A provides the following services:

- Applications Engineering
- Custom Systems and Equipment Manufacturing
- Component Sales and Repair Services
- Service and Support Engineering
